integrating lessons of housing policies
"unlocking knowledge in the southern cities"

"Sharing experiences and developing the left behind countries is one of the most significant as it benefits and improves people's lives."

Lawrence Pato, South Africa

Sao paulo, Brazil
November, 2011
Foreword

Dear members and partners,

Cities accumulate knowledge steadily all over the world. But innovation and management can be found especially in southern experiences that are going through transitions and transformations in very short timeframes. Many cities are keen to share experiences and link to the UCLG mentoring program: this reminds us of the importance of learning and cooperation between peers.

UCLG, as the global network of local and regional governments, is adapting to new demands, ideas, solutions and offers in cities and regions all over the world. In our strategy, adopted in November 2011, UCLG commits for the first time to develop services on learning and decentralized cooperation.

The cities and state government of Sao Paulo have made amazing achievements with their housing and land policies. The role of communities, private partners and city managers in strategic and change processes and projects is best understood when it can be experienced on the ground, as happened here in Sao Paulo.

The peer learning was hosted by the state and the city of Sao Paulo. The Sao Paulo managers and professionals of EMPLASA and housing departments were able to transmit the experience of the communities, the local governments, and the country Brazil where much transformation has happened in the last decades.

The peer learning group, made up of mainly Southern cities, from India, South Africa and Latin America, underlined similarities, differences and applicability of much that was learnt. The peers were impressed by the commitment of public professionals being responsive to the demand of the cities and communities, well beyond the technical service they deliver.

This event has laid a foundation for the future agenda of both organizations, UCLG and Metropolis:

- A concept of learning for change was identified; building on challenges, realities and tasks especially of leaders and city managers
- UCLG and Metropolis will continue to promote peer work
- The mentoring partnership between Durban and Sao Paulo is a joint initiative with Metropolis and UCLG supporting the process and results to come
- The de-regularization or comparative framework is a fascinating topic for cities in emerging countries and might be further discussed inside Metropolis

We thank Sao Paulo for hosting this learning and inspiring our future agenda, and we also thank the government of Norway for its support. We invite cities and partners to look at the following report and to support us in developing the learning agenda.

Josep Roig

Secretary General: United Cities and Local Governments (UCLG)
UCLG PEER LEARNING “Unlocking knowledge in the southern cities”
A learning event organized by the state government of Sao Paulo, the city of Sao Paulo, 
UCLG committee on Urban Strategic Planning, City Future Programme and Metropolis

The peer learning in Sao Paulo

The focus of the meeting was to boost learning from both cities’ approaches to upgrading and regulating the cities’ informal settlements.

The central question was: “What ways are there to legalize the status of inhabitants of poor areas and how can improved and sustainable living conditions for the residents be opened up?”

The following report gives a chronological overview of the projects visited at sites in Sao Paulo and summarizes the outcomes of the presentations and discussions during the event.

Site Visits, first day, November 21, 2011

Site visit to Jardim Pantanal

The day started with a bus tour to “Jardim Pantanal settlement”. During the tour, various activities and projects aimed at urban upgrading were introduced. Large investments are being undertaken to create parks and cycling lanes along one of the city’s principal streets (Rodovia Ayrton Senna da Silva). One of the major projects is ‘Parque Linear’. This park extends over 75 km and covers 107 km². It has been developed as a means to give inhabitants of the bordering low income living areas possibilities for recreational and sporting activities thereby increasing their identification, responsibility and pride for their neighborhood.

After arriving at the site, presentations were given on the context and historical development of the informal settlements in Sao Paulo. Nearly 3 million people are living in favelas in Sao Paulo. The Jardim Pantanal area is the home of 16,000 inhabitants (2010). Vast efforts have been undertaken to improve their living conditions and to legalize their living status: streets have been built, water, sewage, electricity and infrastructure has been constructed, houses (multi-storey) have been developed. These ongoing investments are accompanied by social programmes (‘Urbanisation Programme’) tasked with improving cultural conditions and the educational level of the inhabitants.

The “Trani Tour” was very well prepared, with loudspeaker, bus, food and drinks, but overall with answers and stories to almost all the questions raised. Thank you Eduardo Trani, Diana Motta Violeta Kubrusly, and Helena Monteiro!!
In Jardim Pantanal, several social and labor projects have been implemented. One of them is “Recycling Cooperative Nova Esperança”. The company was established in 2007 and created new jobs and possibilities for improving job qualifications, especially for women. At the same time, it contributes to the cleanliness of the neighborhood and builds the basis for continuous and affordable waste management and recycling of the area’s garbage. The number of workers employed in the cooperative has increased from 13 in 2009 to 33 in 2011 and so has contributed to income generation in Jardim Plantanal.

The “Public Green House School” is another example of the Urbanization Programme of Jardim Pantanal. It offers courses in gardening and environmental education. Gardening plays a key role in very poor areas: on the one hand, it shows people how to grow their own vegetables for healthy food supplements, on the other; it opens up ways to creatively improve the surroundings of their homes and public green spaces. Thereby it benefits households and the whole neighborhood. This project is tailored especially for the target group of women.

Questions:
- How are the inhabitants reacting to their resettlement from ground floor housing to upper stories?
- How was the programme financed?

Answers:
- Since they receive high quality housing and since their status thereby is being legalized, people are not complaining. Additionally there is not enough space available in Sao Paulo to provide further ground floor housing.
- Through World Bank loans originally, but currently, its subsidies are mainly from the federal government.
Additionally, the **School of Arts and Craft** pursues the goal of training residents by the formation of productive groups, aimed at income generation and thereby boosting local development. Courses are offered in sewing and art handicraft. By selling their products in the centre, women who participate in these courses have the chance to create or supplement their income. Correspondingly, the social networks in the neighborhood are strengthened, creating a basis for social stability. The school is very well accepted by the residents of Jardim Pantanal.

Some of the most visible results are being reached with the project **Art Studio São Paulo de Cara Nova**. It offers training in urban art and design, especially for young people. The courses are aimed at encouraging ownership and identity of the neighborhood. People who participate in the courses are supplied with cement and paint for the rendering of the facades of their homes and with knowledge on how to give them a unique and individual design. They have the chance to refurbish and design their home facades with their own hands and according to their own creative ideas. This method is an effective means to increase pride and responsibility for the homes and the neighborhood.

“The understanding of the Brazilian architects is changing, so many of our local architects make teams with social workers, committing with enthusiasm & professionalism to improve living conditions on local scale” **Eduardo Trani, Sao Paulo, Brazil**

“Small interventions can have huge impacts” **Norah Walker, South Africa**
In others areas of the neighborhood, new multi-storey buildings have been built for the people formerly living in squatter, sheds and flood exposed areas. These new buildings were made possible through the joint efforts of the public and private sectors. For people living in these places before formalization of the property status, a contractual method of formalization has been developed: inhabitants pay 15% of their total family income on a monthly basis for 25 years and after this period; they are the formal owners of the property. Building new houses is three times less costly than reconstructing and upgrading existing squatter dwellings.

One of the most striking results of the efforts undertaken in Jardim Pantanal is the decrease of homicide and thefts. Homicides consistently decreased from 22 per annum in 2000 to 0 in 2008 and thefts from 39 in 2000 to 9 in 2008. Reasons for this are the formalized and improved living status of the residents, improved labor and income conditions, and improved social and environmental conditions.

Panel Discussion, first day, November 21, 2011

In the afternoon, a panel discussion took place at the EMPLASA (Empresa Paulista de Planejamento Metropolitan) headquarters. The senior representatives (CEO, State secretaries and Vice president) of the Enterprise for Metropolitan Planning welcomed the participants. Building on what was seen on the site visits of Sao Paulo’s approaches to reach sustainable upgrading of informal settlements, experts and representatives of the Sao Paulo government, Violeta Kubrusly, Sao Paulo city, and Diana Motta and Andreina Nigrielho from EMPLASA presented details on challenges and approaches regarding their planning.
Practitioners and representatives of the participating cities, such as Soobs Moonsammy from Durban and Vishar Kumar from Hyderabad, enriched the discussions presenting the particulars regarding planning in their contexts. This discussion was moderated by UCLG’s Secretary General, Josep Roig and coordinator of Urban Strategic Planning Committee, Sara Hoeflich.

**Key outcomes of the panel discussion were:**

- **The dimension of ‘risk areas’ in Sao Paulo is immense:** There are more than 3,000 risk areas in which fatal events frequently occur. The challenge to improve this situation is tremendous. To face these problems, Sao Paulo has undertaken many efforts already. Several cooperative exercises between the public and the private sectors have been established. One of the most important players in the city is EMPLASA. In the future, the city intends to intensify mutual learning with cities in similar conditions. The learning event has been another step to strengthen mutual learning with the cities of Durban and Hyderabad.

- **With 22 million residents living in 150 municipalities in Sao Paolo,** the city is one of the world’s biggest agglomerations and it is developing dynamically - in the metropolitan region, the three largest airports of Southern America are located and strengthen the industrial growth in the region. Despite this economic growth, there are still vast areas of poverty. Hence, joint action is required. Public resources have to be used in the best way possible. Partnerships with the private sector have to be extended.

- **The conditions and problems in Indian and South African big cities are very similar to Sao Paulo and other Brazilian cities.** Many ideas to resolve urban problems have been implemented successfully in these cities. The means to enable learning is to have a close look at the different approaches by travelling to these cities.

- One key issue to be addressed is to connect the national and regional governments with the local authorities. All sectors have to be taken into consideration in order to reach effective, integrated and sustainable action.

- To facilitate the transfer of good experiences from one city to another successfully different historic situations have to be considered. This is especially relevant when tackling the objective of minimizing social differences.

- **In all cities transportation plays a key role in economic development** as well as the improvement of the social status of their inhabitants. Sao Paulo has implemented several measures in the transportation sector: The Metro-railway, subway and bus networks have been expanded. Moreover sustainable transportation modes have been promoted and cycling lanes have been built. In the near future, the city will implement a monorail train and will operate more hybrid buses.

“Medellin has the same experience as Sao Paulo and the same commitment in addressing informality, it would be useful to learn from Sao Paulo with easy application due to similar circumstances.” Juan Carlos Loaiza, Medellin
In Durban the focus in urban development is on participation and community involvement. This integrative approach requires long term commitment to be successful. Moreover there is focus on environmental assets which receive attention. Public spaces and access to them for all urban dwellers needs to be prioritized. Another major field of investments is the provision of social facilities.

Local Leadership is decisive: To improve it, an evaluation of historical developments and processes is helpful. It opens up ways and shows direction on how to organize and accomplish adequate qualifications of local leaderships.

Even if the urban governmental circumstances of cities in India are different to Brazilian cities, several problems in urban development are similar. Also in Indian cities many slums have been formalized. The Brazilian scheme has been an example for these projects and modified to Indian requirements. One modification refers to the issue of ownership. In India, formalized dwellers receive ownership of their new homes right from the beginning. This way the residents receive an economic value which is important to increase their social status.

In Johannesburg, the main goal of urban development is to make the city livable and sustainable. Basic conditions for a development such as this are economic growth, good governance, sharing of problems, and strong leadership.

“We deliver housing, you build cities. That is a concept worth working towards”  
Sobs Moonsammy, Durban

“We have a lot to share: many of us were colonized, got independent and decentralized power. The economy is growing but inequality remains the challenge as a legacy of history.”  
Anthony Selepe, Johannesburg

“Yes, learning from Sao Paulo is of immediate use in implementing slum redevelopment programs in Andhra Pradesh (India)”  
Vishar Kumar

“Freedom to explore design typology to ensure no one size fits all solution.”
Site visits second day, November 22, 2011

The site visits of the second day of the learning event were to the ‘other side’ of São Paulo, in the wealthy parts of the city where private investors are more keen to partner. Here, the clearly obvious contrasts of urban life were demonstrated.

Tropical Park, Avenida Paulista

At the central street Avenida Paulista, a tropical park has been built. This recreation area shows the visitor local Brazilian vegetation and offers space for rest and silence.

“We thank Bhoophal Reddy, one of the Indian delegates, a forestry engineer, for the comparative insight on tropical plants and their adaptation in cities.”

Visit to the subway system

A visit to the subway system of São Paulo exemplified the vast public and private investments being implemented to improve mobilization to serve a region of almost 40 million people and also as the preamble to the major sport events taking place in the city in the forthcoming years.

They were partly made possible by funding available in the context of the upcoming FIFA world cup in Brazil 2014. Pedestrian tunnels have been constructed to connect the different subway and train stations. Also a driverless subway line is already in operation.

More public transportation infrastructure construction has been planned. This is a necessary requirement to cope with the masses of visitors who are expected to visit the city during the global sports events in 2014 and 2016 (Olympic summer games).

“Fascinating how transport is such an integral part to the entire development process.” Gareth Haysom, South Africa

“Subway system is very impressive and efficient, evident by the number of commuters. It was also clean and safe.” Faizal Seedat, South Africa

“In Brazil the economic and urban growth is very fast and as public sector, we have limited technical and economic capacity to deliver all the infrastructure needed in a Metro that connects 40 million people. We engage with public private partnership with clear criteria defending public interests. Not an easy task!” Diana Motta, Brazil
Nova Luz Project

Another example of Public Private Partnerships for the development of the city was explained with the presentation of the **Nova Luz project**.

In the city centre, major investments are being undertaken in building stock. This project is the largest intervention that has ever been designed in Brazil. The public sector together with a group of local and international organizations have developed an urban development plan for the 50 hectare area which comprises 45 blocks in the core of Sao Paulo’s downtown. The plan aims to preserve and further develop the area as a historical, cultural, commercial and residential centre. The guidelines for the renewal program also specifically focus on the creation of a social environment that promotes social and economic development and equality.

However, it was stated that it is difficult to attract private investment to this part of the city. The complexity of urban renewal projects and the uncertainty of completing the change processes are seen as a financial risk to the private sector.

“New developments should not displace the poor and should be used to cross-subsidize the improvement of the living conditions of the poor” Norah Walker, South Africa

Bernini Skyline

The last stop of the site visits was **“Bernini Skyline”** on top of the Cidade Jardim Mall. These apartment towers – built over a shopping mall – demonstrate the most visible contrast to the slum areas visited on the first day of the meeting: luxurious surroundings with a view on the skyline of Sao Paulo and security staff to safeguard the entire block.

A discussion revealed that the high income groups gather around their joint interests and are reluctant to deal with traffic jams and long distances. It is curious to observe that Cidade Jardim Mall is currently very much appreciated as a place for high income housing although initially in this area office buildings dominated.
This is leading to new centralities and a new order for real estate and land value policies. The proximity of apartments to new working spaces and luxury commercial activities has made them very popular and are a promising capital investment for their owners.

A vivid debate took place: “How did they enter a helicopter and the yacht on exhibition in the shop on the 20th floor?”...

Final Discussion, second day, November 22, 2011

Picture 15: High class exhibitions on top floors

Pictures 16 & 17: High class apartment and views at Cidade Jardim Mall and apartments

Picture 18: Participants of panel discussion
Key outcomes of the panel discussion were:

- **Different options for urban management:**
  - Public and private sector partnerships, especially top end services.
  - Outsourcing of management of districts and setting benchmarks and monitoring.
  - Share and document references: Cape Town city partnerships or Durban lessons from best practices.
  - Participate in urban management learning (document practices across cities)

- **New Regularization for Urbanization**
  The group identified a diversity of topics that can be thoroughly explored, and also encouraged the networks UCLG and Metropolis to further focus on instruments and regulatory frameworks.

- **Development controls that are ineffective in the circumstances**
  India emphasizes mixed use land uses as well as impact fees to facilitate development in poorer areas. Administrative and legal frameworks have been reviewed in India

  “This is very interesting for South African and BRIC cities, as their frameworks are functioning but need to be updated. The experiences and especially of Metropolitan regions can be compared and influence regulations”

- **De-regularisation in preparing for urbanization:**
  Cities to participate: Medellin, Cape Town, Johannesburg, Durban, Hyderabad, Ciudad Sur.

- **Housing policies and partnerships**
  Cities to participate: Medellin (would like to learn about building controls, etc. in relation to informality). The City of Rosario leads this planning aspect.

“City to city learning can improve realities through the management level.”
Inner-development with economic/environmental/social criteria:

Instruments for effective and sustainable regeneration: It is interesting to compare this with European experience. The maintenance of this often high quality public investment is an additional challenge.

Possible comparisons of South Africa with Europe and Latin America (Medellin, Rosario) on urban links to European practice and research on this topic can be useful.

How to incentivize development in urban renewal areas and use tools of planning to facilitate development? How to set up incentives in ways that are appealing to the private sector?

Initiatives to follow up:

Durban Sao Paulo mentoring

A roadmap for this exchange was established and a grant for 60,000 Euros was approved by Metropolis for a three year exchange (2012 to 2015) on the implementation of SP social housing lessons in concrete projects Durban. UCLG and Metropolis are committed to support, advice, promote and monitor the process once a year through learning events and meetings between the two cities.

Rosario and Ciudad Sur mentoring

The mentorship of Rosario and Ciudad Sur consolidated the first strategic set ups and consolidation and supported Ciudad Sur to be able and receive a Cities Alliance grant that should start in 2012.

The Metropolis Initiative of the Sao Paulo state government

Sao Paulo was selected to run a Metropolis imitative on Metropolitan governance. The peer event inspired concrete fields to explore further, such as de-regularization and public private partnerships and Sao Paulo will prepare a meeting in June to precise outcomes. This initiative elaborates a comparative study on PPP and metropolitan governance.

Request on the elaboration of peer reviews

Hyderabad and Johannesburg are exploring ideas for receiving peer reviews. Both cities will involve actively in the Metropolis agenda. Metropolis and UCLG will establish collaboration on peer learning with the Metropolis working group led by the city of Berlin.

“It is important not to re-invent the wheel!”

Pep Roig, UCLG
Learning for change

The graphic illustrates options for fruitful exchange especially for cities in emerging economies and indicates the learning approach, as built in the debates in Sao Paulo:

Change with impact on the territory is happening through decision making. Therefore, peer learning should be close to decision making: in the decisions to be taken (apply lessons in decisions) and in processes and institutional responses (apply lessons in processes). The change and innovation are related in recognizing the challenges of the territory, the system, the demands and values.

In the learning process, the improvement of institutional processes and instruments will be confirmed once the decisions are applied. For example, delivering transport infrastructures: the challenge stresses the capacity of the administration that is not prepared to resolve the problem on its own (challenge). This requires a policy on access to transport (process), followed by decisions and realistic solutions for walkable, connected, and functional road systems in new and existing areas. It requires a sustainable financing scheme that might be a public private partnership to deliver the service.

Peer learning is vital to support the leader and city management tasks and the main assets are the openness and experiences of the peers involved.
A questionnaire at the end of the experience gathered feedback on the main knowledge acquired by the participants and collected impressions in order to improve future similar events. These are some of the highlights:

- Being able to hear stories told and seeing the real and deep passion and commitment shown to making things a better place. "Gareth Hayson, South Africa"
- "We love to share if our peers are committed. Brazil has made big steps ahead and is proud to mentor Durban. Nevertheless, we can learn as much from them." Violeta Kubrusly, Brazil
- "Our common challenge is attracting private sector investment into urban regeneration areas" Norah Walker, South Africa
- "Community participation is key to success" Prashant Kumar Iha, India
- "Very interesting, discussions were very informative. Sao Paulo is very strong in social aspects (social work) and public consultation and S.A has a lot to learn" Johannes Siguso Ndebele, South Africa
- "Some presentations need to stick to allocation times. More time required for questions and points of clarity." Faizal Seedat, South Africa

What should be the role of UCLG, Metropolis and the World’s Secretariat in the future of peer learning?

- "Build on work that has already been done perhaps form small groups to pursue particular issues” Pep Roig, UCLG
- "To put practitioners from different cities, but experiencing similar development challenges, in touch with one another to exchange ideas and debate options” Mark Byerley, South Africa
- "Continue as this experience should in all my works. I feel that learning takes place at peer level and this process reinforced this belief. Thank you” Gareth Hayson, South Africa
- "UCLG is familiar with the development issues and context in many countries and therefore well placed to link people/countries” Norah Walker, South Africa
- "Facilitating and organizing such exchanges in the future. Also, documenting visits. Briefing notes were very useful.” Faizal Seedat, South Africa
- "This change happens through local leadership and this is where city to city co-operation works best.” Sara Hoeflich, UCLG
Unlocking knowledge in the southern cities has pursued the overall goal of obtaining insights into the projects and approaches of Sao Paulo in reaching their objectives of enhancing living conditions for the inhabitants of informal settlements. It followed the agreement of the Committee for Urban Strategic Panning during the previous learning event in Durban in June 2011. Besides this peer learning, a more specific cooperation (mentoring) on housing policies and practices was established between Southern African cities (especially Durban) and Sao Paulo city within the UCLG and the Metropolis network.

The visit to Sao Paulo took place from 21 – 22 November 2011 in conjunction with and prior to the Metropolis world congress in Porto Alegre from 23-26 November 2011. Participants included representatives from Hyderabad, Sydney, Paris, Santiago, Medellin, and from the South African cities: Durban, Johannesburg, and Cape Town. UCLG, and Metropolis, through the city of Berlin, were also represented. The meeting was hosted by different units of Sao Paulo state administration - mainly by the EMPLASA metropolitan planning agency.

The UCLG PEER LEARNING meeting “Unlocking knowledge in the southern cities” has pursued the overall goal of obtaining insights into the projects and approaches of Sao Paulo in reaching their objectives of enhancing living conditions for the inhabitants of informal settlements. It followed the agreement of the Committee for Urban Strategic Panning during the previous learning event in Durban in June 2011. Besides this peer learning, a more specific cooperation (mentoring) on housing policies and practices was established between Southern African cities (especially Durban) and Sao Paulo city within the UCLG and the Metropolis network.

Next Steps: The Durban – Sao Paulo Peer exchange

Both nations, Brazil and South Africa have made significant efforts to improve the situation of the urban poor by developing and implementing massive social housing programs in the last decade.

In the South-South cooperation framework, housing seems an extremely enriching topic to cooperate at all government levels: national, regional, and local, as well as involvement of other actors such as NGOs, CBO’s and for cities to learn from each other. In this context, the support and interest of the Brazilian Ministry of Cities is important. UCLG, Metropolis and the local government associations from Brazil and South Africa will continue to promote this initiative to be a reference in the policy work ahead.

Since the start of the mentorship in 2011, the dedication of the responsible city officers and experts and the support of the Municipal Institute of Learning (MILE) have made possible three peer learning sessions, one in Sao Paulo and two in eThekwini in July in 2012 and 2013. eThekwini is optimizing the professional support of Sao Paulo to apply lessons and change in a pilot project and allocating public funding.

The partnership has focused on the social housing project in Durban, the Welbedacht East, despite the significant number of housing units provided; Welbedacht lacks community infrastructure, services and quality design. For that reason a more inclusive and socially oriented design was seen as defined as crucial to better address the needs of the citizens. In view of this, the input and good practices from Sao Paulo were key to improving the social impact of the investment and contribute to dignified life of the poor. In particular, the use of social data and interaction with NGOs was directional as was the partnership with the Social work Department at the University of South Africa (UNISA).

Soobs Moonsammy, Head of Developmental Planning at eThekwini Municipality has remarked that progress was positive with the help of knowledge exchanges between the two partners. eThekwini has won awards for developing settlements but whether these would all result in sustainable livelihoods is under review – “social assets and economic opportunities are important for all and need to be of equal in significance to shelter”.

On the 18th of July 2013, the cities of eThekwini, Sao Paulo, the regional government of Sao Paulo, UCLG, SALGA, the National ministry of Human Settlements of South Africa shared the progress of the South-South cooperation program between the cities of Sao Paulo and Durban/eThekwini at the Metropolis Annual meeting in Johannesburg.
MESSAGE FROM THE NATIONAL HOUSING SECRETARIAT/MINISTRY OF CITIES TO PARTICIPANTS OF THE SESSION Housing policies in the global south, shifting from a delivery to an integrated approach AT METROPOLIS ANNUAL MEETING 2013

The National Housing Secretariat of the Ministry of Cities of Brazil greatly encourages peer dialogues between Brazil, South Africa, India and other southern nations and communities such as Metropolis has promoted. We believe that global south approaches and cooperation initiatives regarding housing policies and programmes need to be greatly reinforced.

Alongside with the Department of Human Settlements (South Africa) and the Ministry of Housing and Urban Poverty Alleviation (India), we have engaged, since 2008, in the Working Group on Human Settlements of the IBSA Forum (HSWG) in order to exchange experiences and develop such a common approach.

The HSWG has already promoted an international workshop, in 2011, in Pretoria, South Africa, and holds regular videoconferences to discuss specific issues of interest, such as legal frameworks for involuntary resettlement and monitoring and evaluation methods.

The next programmed activity of the HSWG is the seminar "Mobilizing Reflexive Practitioners and Action Researchers for Change in Cities - An agenda for IBSA-Human Settlements Working Group", to be hosted by the Ministry of Cities and the ABC Federal University in São Paulo, on 2-4 December 2013. We will circulate more details as soon as possible. I hope to see you all there!

We wish a very productive session and regret greatly not being able to join you.

Inês Magalhaes
National Housing Secretary
